AÑO 2004

PRESENTACIÓN

Este documento presenta la información estadística a escala nacional y por empresas, de las siguientes variables de producción y consumo del mercado eléctrico ecuatoriano, correspondientes al año 2004:

- Generación de energía eléctrica
- Transacciones de venta de energía eléctrica
- Potencia instalada de generación
- Combustibles usados para generar electricidad
- Transacciones de compra de energía eléctrica
- Balance de energía, demanda máxima y factor de carga
- Pérdidas de energía
- Número de consumidores
- Energía vendida a los usuarios
- Valor facturado a los consumidores
- Precios medios de venta a clientes finales
- Principales datos de las empresas distribuidoras
- Información del Transmisor

Desde el 1 de abril de 1999 inició su funcionamiento, por decisión del Directorio del Consejo Nacional de Electricidad, CONELEC, el Mercado Eléctrico Mayorista, MEM, que es administrado por el Centro Nacional de Control de Energía, CENACE, quien decide el despacho horario de las centrales generadoras, en función de su menor costo marginal; y, liquida las transacciones de compra y venta de energía eléctrica.

Se ha incluido también un resumen de los principales indicadores estadísticos nacionales anuales, que constaron en los boletines 1995 – 1998, 1999, 2000, 2001, 2002 y 2003, publicados por el CONELEC, cuya versión ejecutiva se puede consultar en nuestro portal Institucional www.conelec.gov.ec.

La información presentada se fundamenta en los datos enviados al CONELEC, por las empresas eléctricas generadoras, transmisora y distribuidoras; y, por el CENACE.

A Diciembre de 2004, de acuerdo a la información obtenida, existían en el Ecuador 13 empresas eléctricas generadoras, 1 transmisora, 13 autoproductoras y 20 distribuidoras; de estas últimas 14 contaban con generación, pues aún no se escindían como manda la Ley de Régimen del Sector Eléctrico y 4 de las empresas distribuidoras operan sistemas no Incorporados, por lo que no requieren escindir su generación. Dentro de esta clasificación se debe considerar que las empresas Ecoluz y EMAAP-Q han obtenido su calificación tanto como generadora como autoproductora.

Así mismo, a diciembre de 2004 se han calificado 73 Grandes Consumidores, de los cuales, a 3 se les ha revocado la calificación, 8 están recibiendo energía a través de sus Distribuidoras como Clientes Regulados, 13 obtienen la energía de sus Distribuidoras y 49 de generadoras mediante Contratos a Plazo.

Se incluyen datos de la energía vendida a clientes no regulados y grandes consumidores, así como de la energía producida por los autoproduedores que aún no tienen Permiso o Licencia. Para esta edición, se ha logrado incorporar importante información de las empresas autoproductoras hidráulicas Agua y Luz de Sillunchi, Hidroimbabura y La Internacional y de producción térmica como son OCP, Petroproducción y Repsol YPF, que han dado un incremento notorio en la estadística producción de energía.

Cualquier comentario o sugerencia será bienvenido por medio del formulario que consta en el Sitio Web del CONELEC.

RESUMEN DE LA ESTADÍSTICA DEL SECTOR ELÉCTRICO ECUATORIANO DURANTE EL AÑO 2004

I. ANTECEDENTES

El presente resumen de la estadística del sector eléctrico ecuatoriano del año 2004, recoge los factores más relevantes, de toda aquella información recopilada de las diferentes empresas, mismas que han designado Coordinadores, con quienes el CONELEC ha mantenido permanente contacto para la recepción, revisión y procesamiento de los datos.

Desafortunadamente, a diciembre de 2004, las empresas del sector eléctrico, no cuentan con bases de datos completas de sus características técnicas, ya que la mayoría están en proceso de levantamiento de datos (inventarios) y otras aún no lo han hecho.

La información indicada en forma mensual para los Grandes Consumidores, corresponde al período en el cual actúan en el Mercado Eléctrico Mayorista, -MEM-.

En el presente boletín, se considera las importaciones y exportaciones de energía a través de la Interconexión a 230 kV con Colombia, cuyas transacciones empiezan a efectuarse a partir del mes de marzo de 2003.

II. ANÁLISIS ELÉCTRICO - ECONÓMICO

A.1. GENERACIÓN E IMPORTACIÓN

a) POTENCIA EN CENTRALES DE GENERACIÓN

A diciembre de 2004, sin considerar la Potencia contratada en la Importación desde Colombia, Ecuador poseía una capacidad de generación nominal instalada de 3 520 MW, con una potencia efectiva de 3 331 MW.

La demanda máxima coincidente en bornes de generación alcanzó los 2 401 MW el 20 de diciembre de 2004 y de 2 289 MW (S.N.I.) a nivel de puntos de entrega, que indica un incremento de 156,00 MW equivalente al 7,32% con referencia al año 2003.

La Potencia Efectiva de generación e importación en el país a diciembre de 2004 fue de 3 570,62 MW, de los cuales 3 431,55 MW (96,11%) están incorporados al Sistema Nacional Interconectado, -S.N.I.- y 139,07 MW (3,89%) en sistemas no incorporados.

El total de potencia efectiva corresponde a: 1 732,69 MW (48,53%) en centrales hidráulicas, 240 MW (6,72%) de la interconexión con Colombia, 575,50 MW (16,12%) a centrales térmicas a gas, 160,87 MW (4,51%) centrales térmicas de gas natural, 419,56 MW (11,75%) centrales con Motor de Combustión Interna -MCI- y 442 MW (12,38%) a centrales de vapor.

Las Empresas Distribuidoras Esmeraldas, Los Ríos y Milagro, no tuvieron producción de energía en este Año, especialmente por falta de combustible, aun cuando sus unidades no han sido dadas de baja y se mantienen en espera.

b) POTENCIA DE INTERCONEXIÓN

La potencia contratada en la Interconexión se situó nominalmente en los 290 MW, lo cual produjo que la potencia efectiva sea de 240 MW.

c) PRODUCCIÓN DE ENERGÍA

En el año 2004, el Ecuador tuvo una generación bruta total de 14 226 GWh lo que produjo una venta de energía de 13 222 GWh en el Mercado Eléctrico Mayorista, -MEM-.

El total de energía bruta incluye la producción de las Empresas Generadoras (10 688 GWh → 75,13%), Distribuidoras con generación (717 GWh → 5,04%), Autoproductoras (1 180 GWh → 8,29%) y la Importación desde Colombia (1 642 GWh → 11,54%). Así mismo, de este total, 7 412 GWh (52,10%) fue de origen hidráulico, 5 173 GWh (36,36%) térmico y 1 642 GWh (11,54%) por importación.

Los generadores térmicos usaron combustible en las siguientes proporciones: 169,40 millones de galones de Fuel Oil, 92,30 millones de galones de Diesel, 5,78 millones de galones de Nafta, 11 322 millones de pié cúbicos de Gas Natural y 12,99 millones de galones de crudo.

La facturación total por la producción de energía (12 989 GWh) fue de USD 810,83 millones, de lo cual USD 581,79 millones (71,75%) correspondió a la energía vendida en el Mercado Ocasional, USD 228,28 millones (28,15%) a las transacciones de contratos a plazo y USD 0,76 millones (0,10%) a la Exportación de Energía a Colombia. Sin embargo, en varias ocasiones con el fin de poder cumplir con los contratos a plazo, algunas empresas generadoras se vieron obligadas a comprar energía en el Mercado Ocasional, lo cual significó un egreso de USD 11,97 millones.

A las generadoras les correspondió facturar la cantidad de USD 625,23 millones (77,11%), a las Distribuidoras USD 46,45 millones (5,73%), a los Autoproducidos USD 4,27 millones (0,53%), USD 134,11 millones (16,54%) por la Importación de energía desde Colombia y por la Exportación de Energía a Colombia USD 0,76 millones (0,09%).

El precio medio total de la energía vendida en el MEM fue de 6,24 USD ϕ /kWh. El Mercado Ocasional tuvo un precio medio de 9,90 USD ϕ /kWh, en tanto que el Mercado de Contratos a plazo fue de 3,22 USD ϕ /kWh. Aquí se debe considerar que el manejo de todo el MEM (Mercado Ocasional y de Contratos), se liquidó en el Mercado Ocasional; es decir que aquellos valores por potencia a remunerar, etc. de los contratos, se liquidaron como si la transacción fuera en el Mercado referido.

d) IMPORTACIÓN DE ENERGÍA

La Importación de energía desde Colombia se realizó mediante las líneas de transmisión a 138 kV (Pasto-Pomasqui →12 GWh-), a 230 kV (Jamondino-Pomasqui Circuito 1 → 815 GWh y Circuito 2 → 815 GWh).

Puesto que por la importación de energía (1 642 GWh) se canceló la cantidad de USD 134,11 millones, se tiene que el precio medio de compra fue de 8,17 USD ϕ /kWh.

A.2. TRANSMISIÓN

De acuerdo al balance nacional de energía (ver diagrama mas adelante), el sistema de transmisión recibió 12 813,63 GWh y entregó: 12 189,25 GWh a las Distribuidoras, 125,59 GWh al Gran consumidor Interagua y 34,97 GWh para exportación a Colombia. Por consiguiente las pérdidas por transmisión referidas a la energía recibida se ubicaron en 463,82 GWh (3,62%).

La empresa Transelectric S.A. facturó la cantidad de USD 99,87 millones por la transmisión de energía, lo que corresponde a un precio medio de transmisión de 0,78 USD ϕ /kWh.

A.3. DISTRIBUCIÓN

a) Distribuidoras

La energía facturada a las Distribuidoras, que incluye la entrega a través del Sistema Nacional de Transmisión, - SNT- y la de los autoproducidos, fue de 11 645,58 GWh, de lo cual 5 233,47 GWh (44,94%) fue adquirido del mercado ocasional, 6 330,38 GWh (54,36%) en contratos a plazo con las Generadoras, 35,58 GWh (0,31%) por contratos con las Autoproductoras y el saldo, esto es, 46,17 GWh (0,39%) corresponde a la venta de energía entre Empresas Eléctricas Distribuidoras (Ambato al Sistema Eléctrico Tena en el periodo de enero a mayo y a Sucumbios, y Bolívar a Los Ríos).

La facturación del MEM a las Distribuidoras por la adquisición de energía fue de USD 850,13 millones, correspondiendo USD 639,24 millones (75,19%) por la adquisición al mercado ocasional y USD 210,89 millones (24,81%) a los contratos a plazo.

El precio medio de compra al MEM fue de 7,30 USD ¢/kWh. El precio del Mercado Ocasional fue de 12,21 USD ¢/kWh (se incluyen los pagos por transmisión, potencia de contratos, cargos por congestión, cargos por interconexión, peajes y más rubros de manejo de mercado) y el de Contratos a plazo de 3,29 USD ¢/kWh.

La energía disponible para las Distribuidoras (para venta a sus clientes) incluyendo los sistemas no incorporados fue de 11 752,10 GWh, de los cuales 11 595,09 GWh (98,66%) fueron entregados por el SNT, 93,23 GWh (0,79%) se obtuvieron de sistemas no incorporados al S.N.T., 17,61 GWh (0,15%) procedieron de Autoproductores cuya transacción no es registrada en el MEM y 46,17 GWh (0,39%) son el resultado de ventas entre Empresas Distribuidoras.

En este análisis, debe considerarse que el Gran Consumidor Interagua, compró 125,59 GWh a la Generadora Hidropaute y dicha energía se la suministró desde la subestación Pascuales del S.N.T., es decir, que esta energía no pasó por ninguna Distribuidora.

Dentro del Sistema Eléctrico Ecuatoriano, se han clasificado a los usuarios de la energía en dos tipos, los Regulados, es decir, aquellos que se acogen al Pliego Tarifario y los No Regulados, que son aquellos que realizan contratos a plazo con las generadoras o las distribuidoras para recibir la energía.

La facturación total de las Distribuidoras a sus clientes finales alcanzó los 8 901,36 GWh, 8 692,26 GWh a los clientes Regulados (que al 31 de diciembre de 2004 sumaban 2 952 800) y 209,10 GWh a los 19 clientes No Regulados (se incluye la venta al Sistema Eléctrico Tena (9,43 GWh), ventas de energía entre empresas distribuidoras (46,19 GWh), a los 13 Grandes Consumidores que mantienen contratos directos con las Distribuidoras (Guapán, Cartopel, Graiman, Italpisos, Acosa, Cedal, Provefrut, Rocacem Latacunga, Bopp Quito, Danec, EBC Quito, Novopan y Pintex con 177,20 GWh), la energía reconocida por los Grandes Consumidores a las Distribuidoras a través de los peajes (22,36 GWh), y la venta de la E.E. Sur a 3 abonados (0,11 GWh) del Norte de Perú).

Por otro lado, para satisfacer la demanda de los abonados que por su ubicación no pueden ser atendidos por la Distribuidora de su área de concesión, se produjo la transferencia de energía en bloque entre distribuidoras de 46,19 GWh a un valor de USD 4,06 millones (precio medio de 8,79 USD ¢/kWh).

Por consiguiente las transacciones totales de venta de energía efectuadas por las Distribuidoras es de 8 947,55 GWh, a un valor de USD 796,87 millones, lo cual indica un precio medio de 8,91 USD ¢/kWh.

El valor facturado por las Distribuidoras a sus clientes Regulados fue de USD 778,58 millones (precio medio de facturación de 8,96 USD ¢/kWh), en cambio que a sus clientes No Regulados (grandes consumidores de distribuidoras, energía reconocida en peajes, ventas entre empresas distribuidoras y energía facturada al Perú) el valor fue de USD 18,29 millones (precio medio de 7,16 USD ¢/kWh) totalizando USD 796,87 millones, con un precio medio final de 8,91 USD ¢/kWh.

Las facturación a los grandes consumidores de las distribuidoras alcanzó los USD 9,97 millones, que relacionados a la energía indican un precio medio de 5,63 USD ¢/kWh.

El factor de carga de las empresas distribuidoras pasó del 58,47% en el año 2003 a 58,26% en el año 2004.

b) Grandes consumidores de generadoras.

Debe considerarse también a los Grandes Consumidores que mantienen contratos a plazo con las Generadoras y cuya energía (603,61 GWh) es recibida a través de los diversos sistemas de distribución y el Gran Consumidor Interagua (125,59 GWh) que recibe directamente del SNT en la subestación Pascuales. El paso de energía por los sistemas de distribución provoca pérdidas, las mismas que son reconocidas por los Grandes Consumidores a través de los peajes de distribución (22,37 GWh). La facturación de energía a los Grandes Consumidores de las Generadoras fue de USD 37,88 millones y por peajes USD 3,50 millones, con lo cual la facturación total por los 751,57 GWh fue de USD 41,38 millones, con un precio medio de 5,51 USD ¢/kWh.

c) Exportación de energía a Colombia.

Mediante la interconexión a 230 kV con Colombia, se produce la venta de 34,97 GWh, por lo cual se factura USD 0,76 millones (precio medio de 2,18 USD ¢/kWh).

(3): Se excluye la energía de Guapán, Acosa (desde mayo), Cedal (enero) y Rocacem Latacunga; Cartopel, Graiman e Itaipisos (desde febrero) y Bopp Quito, Danec, Delltex, EBC Quito, Novopan (desde agosto) y Pintex (desde octubre), ya que está considerada en la Energía Disponible para los Distribuidores Azogues, Cotopaxi, Centro Sur y Quito respectivamente.

(4): Se produce por el paso de la energía a través de los sistemas eléctricos de las distribuidoras.

n.a.: no aplica; n.d.: no disponible

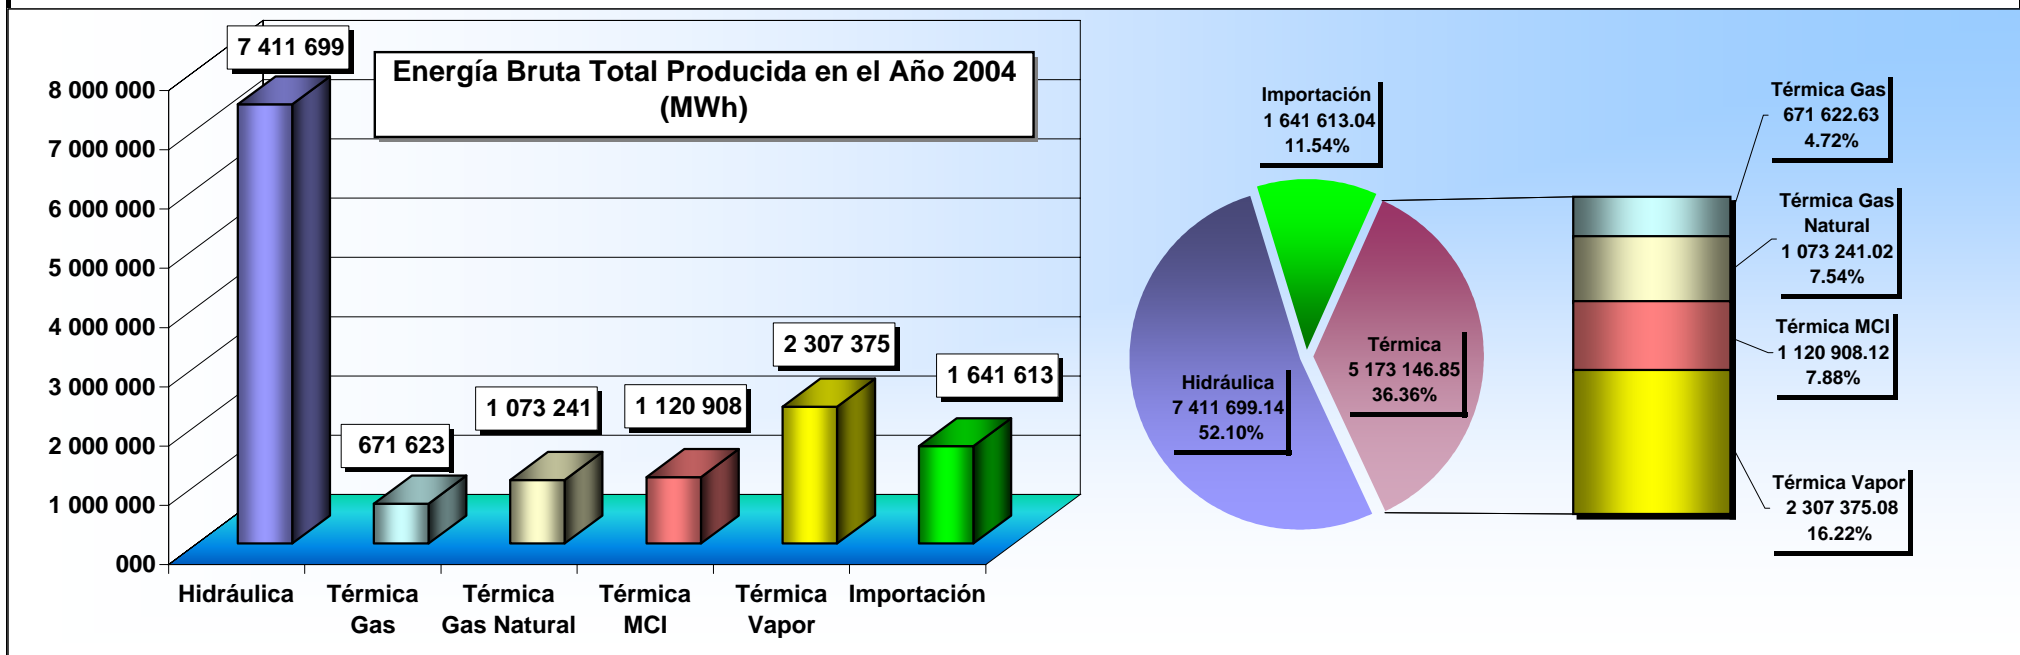

Los porcentajes en esta tabla son calculados respecto de la energía disponible en cada punto.

No se ha descontado la energía comprada por las Generadoras en el Mercado Ocasional para cumplir con contratos, ya que este cuadro indica transacciones de venta de energía.

Algunos precios medios que parecerían exagerados se deben a que se despachó menos energía y se mantienen los valores por potencia remunerable puesta a disposición.

CAPÍTULO V: BALANCE Y PÉRDIDAS DE ENERGÍA EN LAS EMPRESAS DISTRIBUIDORAS

NOTAS ACLARATORIAS PARA EL BALANCE DE ENERGÍA DE LAS EMPRESAS ELÉCTRICAS DISTRIBUIDORAS

Energía Recibida del Mercado Eléctrico Mayorista para consumo de la Distribuidora, corresponde a la medida en el punto de entrega y en ciertos casos es igual a la informada por el CENACE, cuando la Distribuidora no realiza medición propia y asume dichos valores.

Energía Comprada a otras Empresas Eléctricas, cuando por factores de ubicación geográfica, la distribuidora vecina atiende a clientes dentro del área de concesión de la otra distribuidora.

Energía Comprada a Autoproductores, corresponde a la energía que se compra a autoproducidos registrados o no en el MEM.

Energía Generada No Incorporada al MEM, se entiende a aquella energía de sistemas de generación aislados, que no están conectados al Sistema Nacional Interconectado (S.N.I.).

Energía Disponible del Sistema, incluye energía de terceros y de clientes No Regulados de la propia Empresa y toda aquella energía que recibe la distribuidora en sus puntos de recepción.

Energía disponible para el Distribuidor, incluye energía de clientes regulados y libres de la propia Empresa.

La Energía Entregada a Terceros corresponde a la que se transfiere para Grandes Consumidores, a Clientes No Regulados por el pliego tarifario (E.E. Distribuidoras, exportación, etc.) o a otros Sistemas de Distribución.

Energía Facturada a Clientes Regulados es aquella que se factura a los clientes de la distribuidora que están sujetos al pliego tarifario.

Energía Facturada a Clientes No Regulados, es la entregada a Grandes Consumidores, a Otros que no son clientes del Distribuidor o a similares.

Peajes por transporte de energía para terceros (Gran Consumidor u otro que no es cliente de la Empresa). Calculado con metodología previamente aprobada por el CONELEC.

Las Pérdidas del Distribuidor se calculan en función de la Energía Disponible del Distribuidor, menos la Energía Facturada a Clientes No Regulados, menos la Energía Facturada a Clientes Regulados y menos la Energía reconocida por peajes.

Pérdidas de distribución totales expresadas en porcentaje, corresponden a las Pérdidas del Distribuidor en MWh, referidos a la Energía Disponible del Distribuidor en MWh.

La Demanda Máxima, corresponde a la Demanda Máxima de potencia activa del mes en consideración, registrada por la distribuidora y que es ocasionada por el consumo de sus clientes.

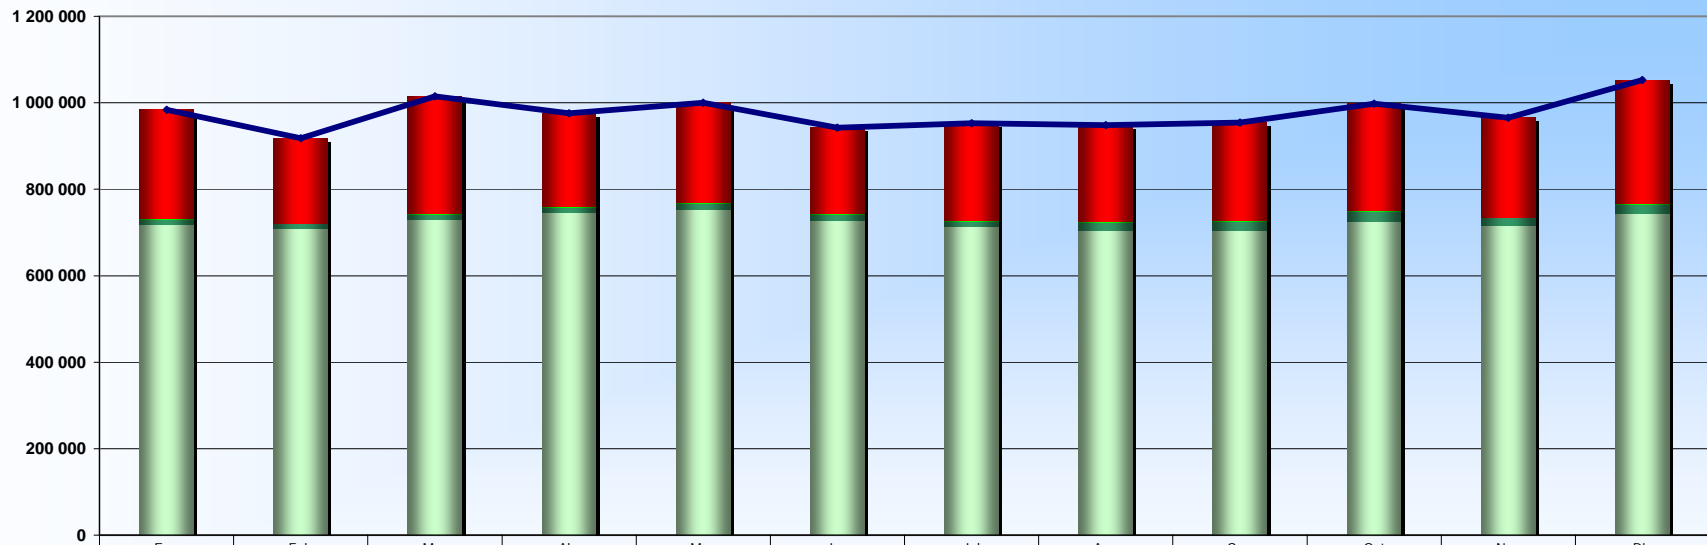

Fecha y hora de Demanda Máxima: Cuando se produjo la demanda máxima.

El Factor de Carga está referido a la demanda máxima y a la energía disponible del distribuidor para el periodo considerado.

El Gran Consumidor recibe su energía mediante Contratos y en el M. Ocasional paga el manejo de mercado, es decir se incluyen los costos por potencia, reservas, transmisión, rentas de congestión y otros.

El manejo de mercado y peaje de los Grandes Consumidores de E. Distribuidoras (Guapán, Cartopel, Graiman, Italpiso, Acosa (desde mayo), Cedal (enero), Rocacem Latacunga y desde agosto las empresas Boop Quito, Danec Delltex, EBC Quito, Novopan y Pintex), está incluido en el valor de la energía. El Gran Consumidor Interagua no paga peaje puesto que no utiliza las instalaciones de ninguna Distribuidora por cuanto recibe su energía directamente de la S/E Pascuales.

La mayoría de los agentes, al cierre de la recopilación de datos, no tuvieron información sobre los valores recaudados especialmente del mes de diciembre.
